WORK EXAMPLES

Furry Friend Finder , first group project while attending uncc bootcamp

<https://github.com/Asieger75/Furry-Friend-Finder>

This application aims to help the user(s) search for a new pet as well as what type of animal choice to get (Cat or Dog), the animal's gender, breed and location. We have set up an API that will provide users with GoogleMap searches that will help users find locations for a pet store to find their new furry friend.

Beerphoria , second group project while attending uncc bootcamp

<https://github.com/sjohn214/BeerPhoria>

The purpose of this application is to create a beer logger with MySQL, Node, Express, Handlebars, and Sequelize. This project will follow the MVC design pattern by using Node and MySQL to query and route data in the application, and Handlebars to generate the HTML.

ReadMe Generator , one of the first assignments using node while attending uncc bootcamp

<https://github.com/Maddisontaitano/ReadmeGenerater>

This project enables a user to effectively produce a structural ReadMe with extensive information about themselves and their application. By prompting the user with a series of questions, this easily creates an effective readMe with a polished and professional look.

EDUCATION

Olympic High school, charlotte NC — *Diploma*

SEPT 2015 - JUN 2019

This was the high school I attended and graduated with a 3.3 GPA

UNCC Charlotte, Charlotte NC — *Certificate of Graduation*
